H₂flo[®]

Pool Equipment

Premium Salt Water Chlorinator

Salt Water Chlorination Made Easy

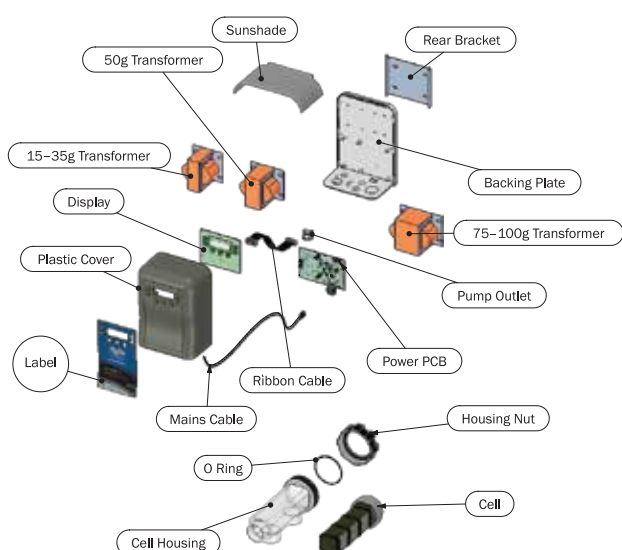

The H₂flo salt water chlorinator is designed and manufactured in Australia to suit our tough conditions using only quality electrical components and commercial grade cell materials.

Using industry proven technology, the H₂flo's embedded micro-controller delivers an intelligent and responsive system not only for commercial users but also for domestic customers that is efficient, reliable and easy to operate.

The H₂flo takes into account your water temperature and salinity to help maintain the correct chlorine levels in your pool, simply enter in your settings on the LCD display, it's that easy.

The self-cleaning cell is a standard inclusion with the H₂flo Salt Water Chlorinator, helping to reduce maintenance while saving you time and money. A compact fully sealed design built for Australian conditions.

For Salt Water Chlorination the premium choice is H₂flo.

Suitable for both mineral and sodium salt pools 3500–6000mg/L

Features

- Clever micro-controller
- Easy to operate and program
- Easy to read backlit display
- Display brightness control
